# Onigiri Forming Machine GSE+Onigiri Wrapping Machine PS GSE+PS

## The Smallest, Most Compact Model for High-Quality Rice Ball Production and Packaging

### Onigiri Forming Machine[GSE]

- ■Production Capacity: MAX 1,800 units/hour
- ■Power Supply: Three-phase AC 200 V
- ■Power Consumption: 200 W ■Machine Weight: Approx. 220 kg
- ■Maximum Rice Hopper Capacity: 3 shō of cooked rice (approx. 9 kg)
- ■Machine Dimensions: 1,500 (Width) × 750 (Depth) × 1,650 (Height) mm

### Onigiri Wrapping Machine[PS]

- ■Production Capacity: MAX 1,800 pieces/hour
- ■Power Supply: Three-phase AC 200 V
- ■Power Consumption: 0.9 kW ■Machine Weight: Approx. 300 kg
- ■Maximum Nori Capacity: 200 sheets
- ■Machine Dimensions: 1,330 (Width) × 850 (Depth) × 1,150 (Height) mm

## 01

### Crunchy Rice Balls Wrapped in Plastic Film

We produce rice balls in film packaging for you to enjoy crispy nori upon opening.

## 02

### Capable of filling and wrapping ingredients

Fill the rice balls and shape them firmly. Their light, fluffy texture—created by trapping air inside—is the appealing point.

## 03

### Safety is taken seriously

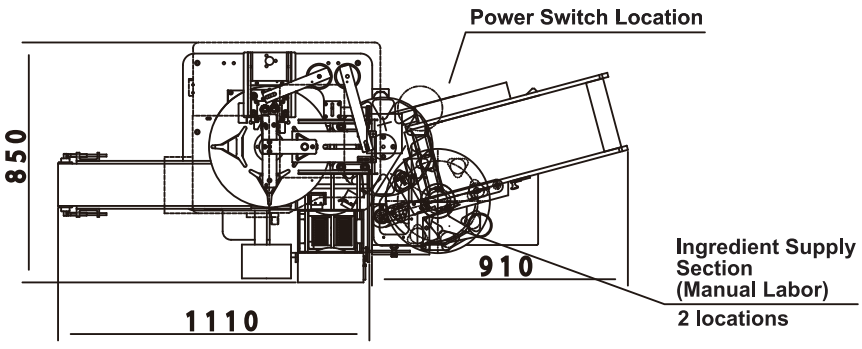

If the cover is open, the sensor will be activated and the machine will stop operating to prevent unexpected accidents.

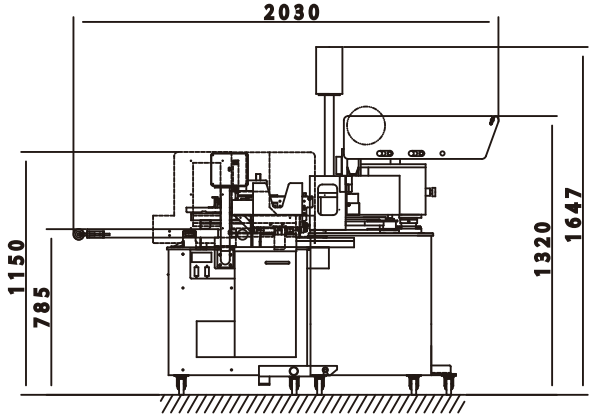

## 04

### Space-saving compact size

While capable of handling professional-grade packaging, the machine's compact size makes it a popular choice.

# Onigiri Molding Machine GSE

**A classic wrapped rice ball with a fluffy texture thanks to our special steaming method**

## Work Procedures

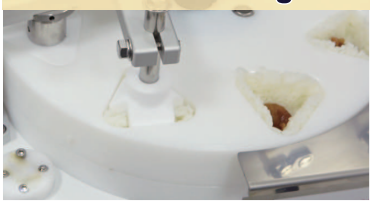

### 1.Add the rice

### 2.Add the ingredients

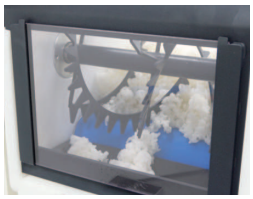

### 3.Add the fillings

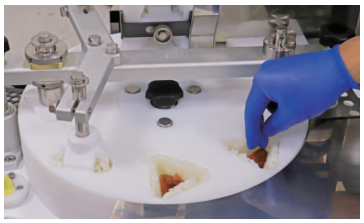

## Key Points

Our unique rice-fluffing mechanism creates light and airy rice balls.

Fillings can be wrapped around the rice center with our proprietary press.

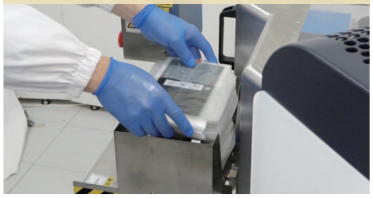

Disconnecting the machine from the small rice ball automatic packaging machine can remove them without packaging.

# Onigiri Wrapping Machine PS

**A compact rice ball packaging machine capable of producing 1,800 rice balls per hour**

## Work Procedures

### 1.Setting nori sheet

### 2.Packaging

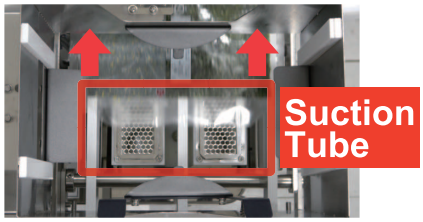

### 3.Conveyor Discharge

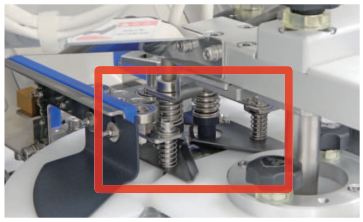

*The cover has been opened for the photo.

## Key Points

The suction tube feeds nori sheets one at a time in a steady stream, with the machine's stock of 200 sheets.

The heat-sealed film can be peeled smoothly when opening the package.

It can also be docked with POS labelers and POP labelers, further improving operational efficiency.
